PROFILE

A highly motivated 6th semester Mathematics student at Jakarta State University with a strong analytical mindset and a passion for turning data into actionable insights. Trained in Data Science through an intensive bootcamp and certified as an Associate Data Scientist by BNSP, with hands on experience in Python, SQL, Machine Learning, and data visualization across academic projects and applied analytics work. Recognized for strong performance in essay and mathematics competitions, and experienced in leading teams to deliver measurable outcomes. Currently seeking internship opportunities to apply rigorous analytical skills and support data driven decision making.

SKILLS

- Python, C++ (Intermediate)
- Excel (Intermediate)
- SQL (Intermediate)
- Streamlit (Intermediate)
- Github (Intermediate)
- Power BI (Intermediate)
- Looker Studio (Intermediate)
- Google Colab (Intermediate)

EDUCATION

Jakarta State University

Bachelor's Degree in Mathematics

GPA: 3.60/4.0

Jakarta

Sept 2023 - Present

Relevant Coursework: Programming Algorithm, Basic Statistics, Linear Program, Data Structure, Algorithm Design and Analysis, Mathematical Statistics I & II.

ORGANIZATION EXPERIENCE

Kelompok Peneliti Muda

Research Member

Jakarta

Nov 2023 – Des 2024

- Co-authored a peer-reviewed scientific paper, contributing to research design, data analysis, result interpretation and presented research findings
- Won three national scientific essay competitions, presenting data-driven arguments and solutions.

EXPERIENCE

Python Data Scientist Intern – VINIX7

Data Scientist

Jakarta

February – May 2026

- Completed an end-to-end Data Science internship covering SQL, data preprocessing, exploratory data analysis (EDA), machine learning, deep learning, big data processing, and model deployment.
- Built data pipelines and performed data cleaning, transformation, feature engineering, statistical analysis, and hypothesis testing using Python, Pandas, NumPy, SQL, and PySpark.
- Developed machine learning and deep learning models for sentiment analysis, predictive analytics, text classification, and image classification using Scikit-Learn, XGBoost, TensorFlow, CNN, LSTM, and MobileNetV2.
- Applied unsupervised learning techniques including PCA, K-Means, DBSCAN, and Association Rule Mining, and implemented deployment workflows for production-ready machine learning applications.

Data Analyst Internship – Bank Sampah Digital

Jakarta

Data Analyst

August – October 2025

- Consolidated and cleaned multi program revolving loan data (NPS, Kitabisa, YBM PLN) into a single master dataset for 89 borrowers, Rp98.5M disbursed, Rp75.1M repaid, Rp23.4M outstanding.
- Delivered portfolio performance and risk insights, 76.25% overall repayment rate, only 30% fully paid in YBM PLN, and identified top risk area Taman Cilegon Indah with Rp5.1M outstanding.
- Built a Looker Studio dashboard for program monitoring reporting.
- Built borrower and loan segmentation to quantify repayment gaps, Rp2.0M loans repaid at 62% versus Rp0.5M to Rp1.0M at 98% to 100%, and proposed an action plan to cut outstanding by **at least 25% in 6 weeks**.

PROJECT EXPERIENCE

Tokopedia Sentiment Analysis & Review Intelligence

Jakarta

Work in Team

May – June 2026

- Developed an end-to-end sentiment analysis pipeline using 65,543 Tokopedia product reviews, including data preprocessing, TF-IDF vectorization, feature engineering, and class imbalance handling with RandomOverSampler.
- Evaluated multiple machine learning models using Precision, Recall, F1-Score, and Macro F1 metrics, achieving **91% accuracy** and **0.84 Macro F1 Score** on the selected model.
- Built and deployed an interactive Streamlit application for real-time sentiment prediction, utilizing Pickle serialization and Cloudflare Tunnel for public access.

Final Project (Income Classification)

Jakarta

DataVerse Team Member

March – May 2025

- Developed a classification model using U.S. Census data (32K+ rows, 15 features)
- Developed and evaluated multiple models (Logistic Regression, Decision Tree, KNN, Random Forest, XGBoost, Gradient Boosting) with and without SMOTE for imbalanced data handling.
- Tuned hyperparameters using GridSearchCV, leading to selection of **Gradient Boosting** as the best-performing model, achieving **91% ROC AUC**, **83% test accuracy**, and **68% F1-score**.

More projects can be seen at my portfolio: portfolio-ds-ilyas.vercel.app.

ACHIEVEMENTS & CERTIFICATION

Mathematics Competitions

- First Place in Mathematics at the Indonesian Science Language Olympiad (GYPEM) - 2023
- Second Place in Mathematics at the National Science Olympiad (Siap Olimpiade) - 2023
- Predicate of Gold Medal at the National Mathematics Olympiad Festival – 2023

BNSP Competency Certification

Associate Data Scientist - LSP Teknologi Digital

Issued: Jul 2025 (valid 3 years).

Competency units covered include Collecting Data, Examining Data, Validating Data, Defining Data Objects, Cleaning Data, Constructing Data, Determining Data Labels, Building Models, and Evaluating Model.

Scientific Writing & Essay Competitions

- Third Place in National Essay Competition at LOGIKA UI – 2025
- Third Place in National Essay Competition at the 7th Islamic Economic Festival – 2024
- Second runner-up in National Essay Competition at the HK ExpertTalk Competition – 2023
- First Place in Essay Competition at the 21st Pekan Ilmiah Fisika – 2023

Bootcamp Training Certification

Data Science – Digital Skola (3 Months)

Issued: May 2025

Delivered a capstone machine learning project and Graduated with **Excellent** performance.
